Cross Platform Mobile Applications

Solutions For Your Business Needs

More and more businesses are turning to mobile and tablet applications to improve their productivity and increase their portfolio of customer service offerings. Amzur's mobile app development team has helped customers with a wide array of business needs, everything from cutting edge business intelligence solutions to digital advertising. We've helped companies develop solutions for:

Custom Business Applications | Business Intelligence & Reporting
 Digital Media Streaming/Content Aggregation | Social and Gaming

Key Service Areas For Enterprise Mobility

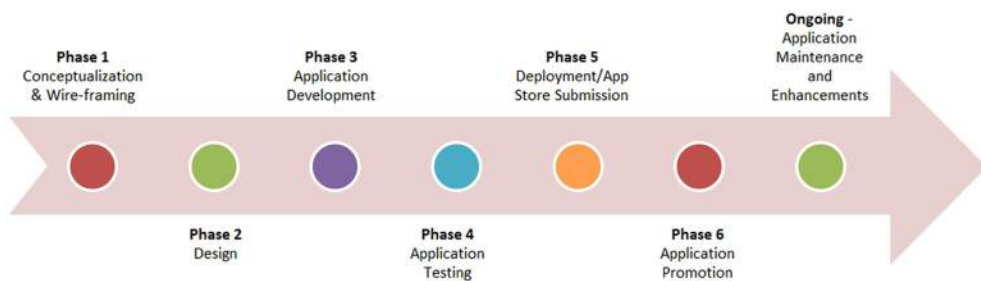

As a leader in mobile app development, our enterprise mobility solutions leverage industry best practices and project-proven strategies to help you meet your biggest challenges. Our services include:

Mobile Application Development Approach

Amzur follows a six-phase approach that ensures the client's business needs are fully met. Our certified project managers are dedicated to delivering unmatched quality and timely deliverables at each phase of the project.

Solutions for Industry Verticals

Retail | Finance/Banking | Digital Media/Advertising | Engineering | Insurance | Pharmaceutical | ERP | CRM

Our Key Customer Success Stories

Energy Communicator - Solarsa

Energy Communicator is a powerful application used today to remotely manage, optimize, and report energy utilization from within a building. The app is used to for various management tasks such as changing set points of the HVAC systems, creating lighting on/off schedules, and running appliances at the location—all done remotely using the app. We used sophisticated techniques in IP access end point management to bring the project to fruition, creating a reliable, secure app that helps customers efficiently manage building systems, no matter where they are.

Tango Management Consulting L.L.C

Tango Management Consulting is a store and retail management advisory company that helps location centric clients plan, build, and operate their locations more effectively. We worked with Tango to develop a unique mobile app to monitor retail activity at any given location. Stakeholders can now evaluate a retail location's performance metrics over time and by using location-specific demographics, even evaluate the attractiveness of a prospective location for a store/site. The apps we delivered use the latest in multimedia features that combine rich functionality and ease of use to fully support Tango's business needs.

Fintech Mobile

Overland commercial distribution regulations can vary significantly from state to state, and managing that complexity can drive inefficiencies and costly delays in delivery times. Drivers are often required to maintain detailed records of signatures, quantities, and delivery locations. To simplify this cumbersome, complex business problem we developed a service-based mobile app that manages the entire distribution process. Using location-based mobile solutions, our teams delivered an app that makes deliveries easier to track. Now drivers can instantly access real-time information on delivery quantities, retailers can monitor delivery progress anywhere anytime, and distributors can track every delivery across all their locations.

Digital Content Delivery For A Major Media Corporation

A premier US-based media corporation needed to distribute updated news content across multiple mobile platforms. We not only built a mobile app that delivered the news content to users, but we also developed a backend application to support the client's purchasing and fulfillment requirements. By leveraging standardized templates and style sheets during the design phase, our solution delivered the functionality the client was looking for as well as significant cost savings.

Phase 1 - Concept & Wireframe Development

Amzur's project team to define all the requirements of the mobile application and formalize the project goals.

Phase 2 - Design

Amzur's creative design team develops the visual look and feel as well as the application functionalities. All design concepts, functionalities, and expected timelines are developed during this time.

Phase 3 - Application Development

Our world-class development team begins the parallel tracks of constructing the user interface and the actual coding of the application.

Phase 4 - Application Testing

Our testing teams utilize a systematic, robust methodology for testing the application to its fullest capabilities.

Phase 5 - Deployment/App Store Submission

Following our QA process your application is ready to be rolled out. If you're new to the mobile app world, we can take care of everything from creating a development account for you to submitting the app to the store or marketplace that best suits your needs.

Phase 6 - Application Promotion

While some customers like to publicize and market their apps with their in-house marketing teams, for those who need assistance in this area we can help you commercialize your app by developing a customized, app-specific market strategy.

Ongoing - Maintenance, Support and Enhancements

We offer the full range of maintenance and support plans. Whether its post-production application enhancements, per incident support, or a 24x7 help desk, Amzur can deliver the support solution for your app that meets your needs.
